# DAP SIP Door Phone User Manual

## 1 Overview

### 1.1 Introduction

DAP is SIP access control phone with advanced audio system with echo cancellation. Compatible with the standard SIP indoor monitor, you can talk to visitors at any time. DAP can also be bound with an external camera supporting onvif protocol to realize video call.

DAP provides users with keyless control and convenient, supports a variety of ways to open the door without keys. As long as it is an electronic door lock, it can be opened remotely, or it can be opened locally using an unlock code or IC / ID card. It can ideally control communication and security through the network, and can be well applied in areas such as commerce, institutions and residences.

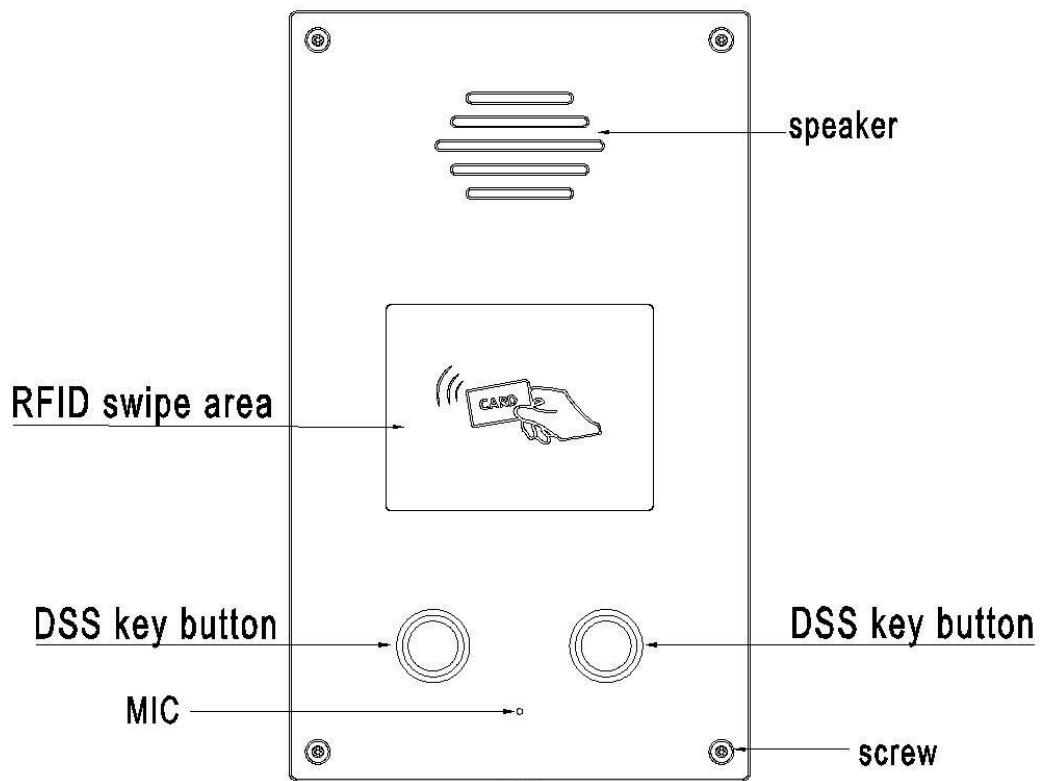

### 1.2 Feature

- Access Control
  - Access control unlock: DTMF, unlock code, IC / ID card
  - SIP Door phone function
  - Full two-way
  - Auto answer by default
  - Remote control via URL / URI
  - Speed dial
- ManagementFunction
  - Automatic configuration: FTP/TFTP/HTTP/HTTPS/PNP
  - Configuration via HTTP / HTTPS web
  - SNMP/TR069 , NMS cloud management
  - Time synchronization service / Daylight saving time
  - Network upgrade firmware
  - System log
  - Configuration backup / restore
- Audio Function
  - HD audio
  - Two-way audio streaming
  - Wideband codec: G.722
  - Narrowband codec :PCMA, PCMU, G.729, G723\_53, G723\_63, G726\_32
  - Echo cancellation of G.168
  - Voice Activity Detection (VAD)
  - Comfort noise generator (CNG)
  - Built-in micro speaker
  - Acoustic echo cancellation audio output
- Protocol and network
  - SIPv1 (RFC 2543) 、 v2 (RFC 3261)
  - SIP based on TLS、SRTP
  - RTSP
  - IPv4/IPv6

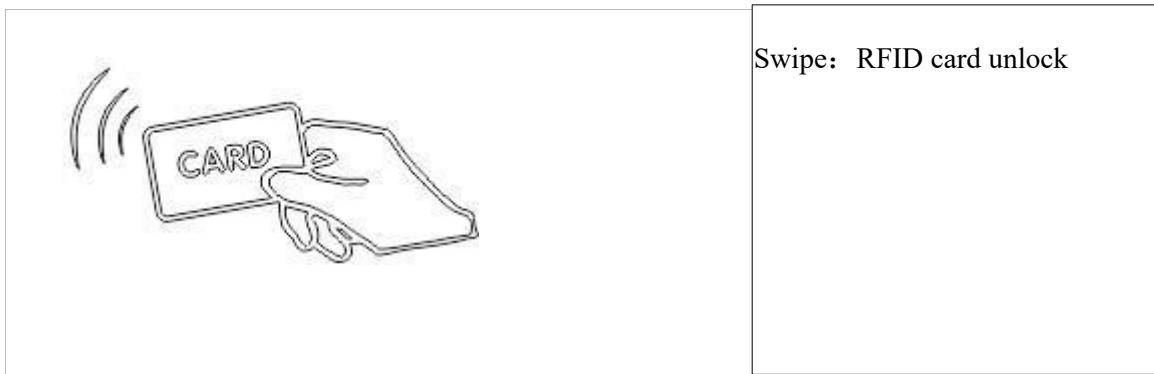

- TCP/UDP
- RTP/RTCP、RFC 2198、RFC 1889
- HTTP/HTTPS/FTP/TFTP
- ARP/RARP/ICMP/NTP
- DNS SRV/A Query/NATPR
- Primary and secondary DNS server
- Private network penetration protocol, session timer
- 802.1p/q、DSCP、802.1X
- DHCP/Static/PPPoE
- DTMF mode: In-Band、RFC 2833、SIP INFO

## 1.3 Hardware Introduction

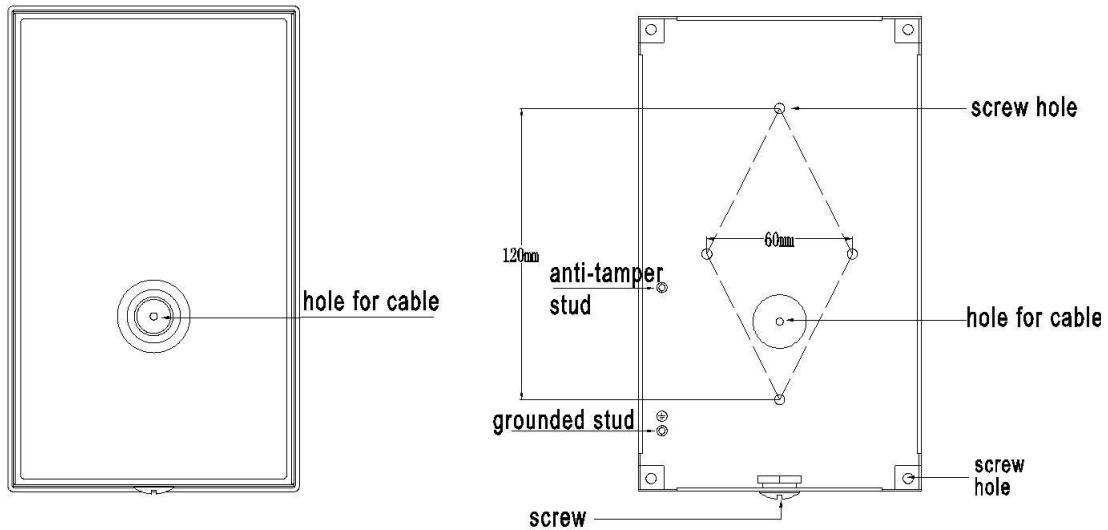

- Front view and keyboard description

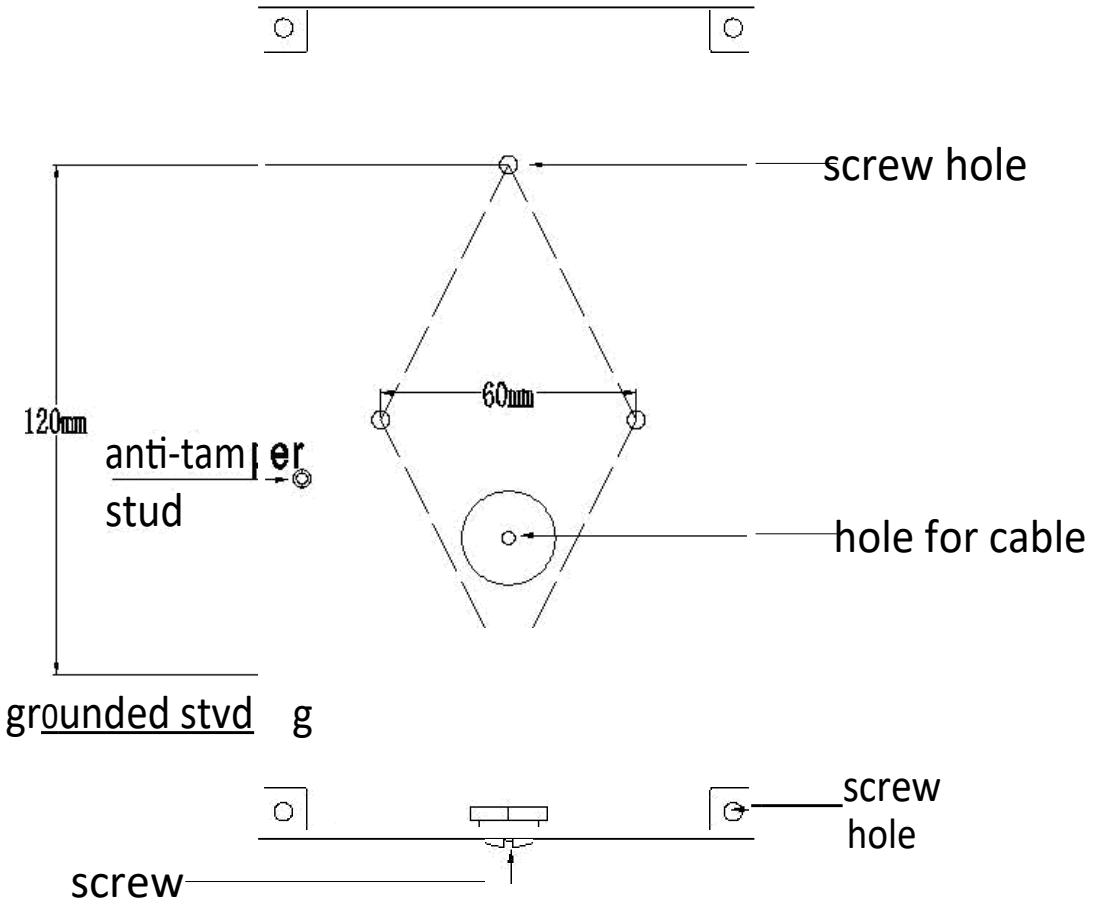

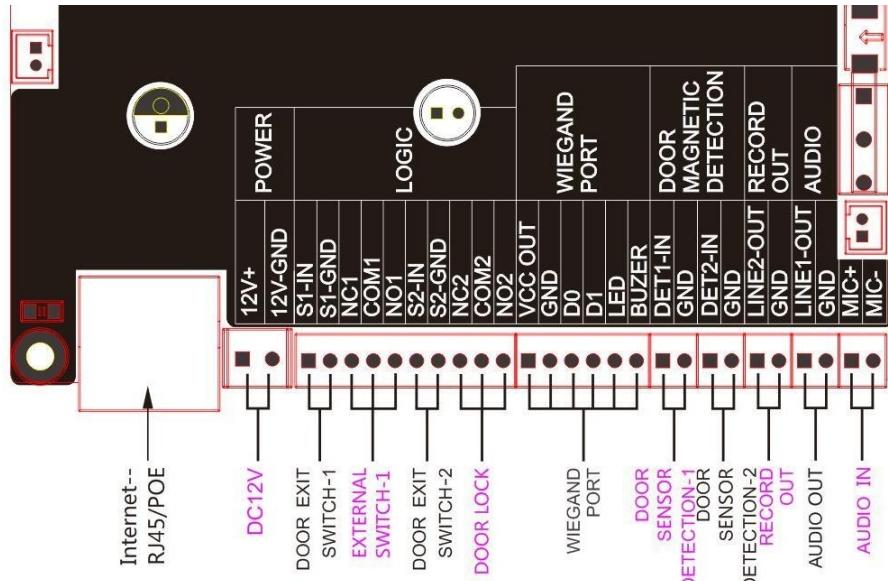

\*

- Rear view and panel description

\*

Power Adapter	DC 12V/1A power adapter connector
Internet	LAN port for network connection, 10 / 100M, RJ45 Interface,POE
Door EXIT SWITCH	To connect exit switch button
EXTERNAL SWITCH/DOOR LOCK	To connect magnetic lock
WIEGAND PORT	To connect external wiegand reader
DOOR SENSOR DETECTION	To detect the lock close/open
RECORD OUT	To connect recorder
AUDIO OUT	To connect speaker
AUDIO IN	To connect MIC

## 2 Installation

### 2.1 Check the contents of the package

Please refer to the packing list below to check the integrity of the packing.

\*

DAP SIP Door phone	1
--------------------	---

Screw accessories package	1
Ethernet cable	1
Quick Guide	1
Rfid card(Mifare 1)	1

## 2.2 Installation Guide

### Step 1 : Power on

The equipment needs external 12V DC power supply, Connect the supplied power adapter to the power port , and then plug the adapter into an available power outlet(If you don't have external 12V DC power supply, you can also use POE network cable). Until the button light is on and two beeps are heard.

Please use 12V DC/1A power adapter, or POE

### Step 2: Connect Network

Connect one end of the Ethernet cable to the Internet port on the back of the DAP, and the other end to the wall network jack.

### Step 3: Connect to computer

Press DSS1 key continuously for 10 seconds, and the device will broadcast its IP address.

### Step 4: Configure the device

Start a web browser on the computer and enter the phone's IP address into the address bar. If the address is correct, a login screen will appear, enter the user name and password to log in to the web console to log in to the phone webpage.

Default account & password: admin/admin。

DP series SIP doorphone support DHCP/Static/PPPoE to search the IP address, Press DSS1 key continuously for 10 seconds, and the device will broadcast its IP address.

## 3 Feature

### 3.1 Dial

You can use the following three methods to make calls:

#### 3.1.1 One touch dial :

Click "Door Phone-Call fature" in the left navigation bar to enter the phone configuration, In the “Call Button Selection” item, you can set 2 call button, each button can set 4 commonly used indoor unit numbers, of which “Call Button Day 1 ~ 3” is the outgoing number during the day, Call Button Night is the outgoing number at night, the number is a one-touch dial button The dialed number (DAP phone can directly press the "Dial" button to dial the number); Round

Robin Time Out is the time-out period . If a number times out and does not answer, the door phone will automatically dial the next number (Call Button Night umber at night); In Day Night Setting, you can configure the day and night start time to determine the number dialed at the current time;

Click on Submit Button.

The screenshot shows a web-based configuration interface for a door phone. The top navigation bar includes links for Status, Account, Network, Door Phone (which is highlighted with a red box), PhoneBook, Maintenance, and Security. The status bar indicates the default password is set to change, the logout time is 2021/06/30 17:05:53, the language is English, and the date and time are 2021/06/30 17:05:53.

**Left Sidebar:**

- Basic
- Time/Date
- Call Feature** (highlighted with a red box)
- Voice
- Ringtones
- Out Plan
- Action URL
- Multicast
- Intercom
- Door Lock
- Access
- Alarm
- Camera

**Main Content Area:**

**Timeout For Answer:**

Outgoing Call	<input type="text" value="60"/> (30~120s)
Incoming Call	<input type="text" value="65"/> (30~120s)

**Hang Up After RTP Time Out:**

Time Out	<input type="text" value="10"/> (5~60s)
----------	---

**Call Button:** (highlighted with a red box)

Call Button Selection	<input type="text" value="1"/>
Call Key Light	<input type="text" value="Enabled"/>
Call Button Day 1	<input type="text" value="884"/>
Call Button Day 2	<input type="text" value="884"/>
Call Button Day 3	<input type="text" value="884"/>
Call Button Night	<input type="text" value="804"/>
Round Robin Time Out	<input type="text" value="60"/> (5~60s)

**Day Night Setting:**

Day Start	<input type="text" value="9"/> Hour: <input type="text" value="0"/> Min: <input type="text" value="0"/>
Night Start	<input type="text" value="19"/> Hour: <input type="text" value="0"/> Min: <input type="text" value="0"/>

**Help:**

**Description:** Call Button  
Set speed dial numbers with call button.

**Day Night Setting:** Set day and night time range.

**Web Call:** Dial out or hangup call by web.

**Warning:**

**Field Description:**

**Submit Shortcut:**

### 3.1.2 Number dialing:

Enter an existing SIP / IP account and press the dial key.

## 3.2 Swipe

Click “Door Phone - Access”, in the “Access Card” items, swipe a new card to the DAP, then press “F5” refresh the web GUI, RFID card number will auto appeared, then click “add” item.

Use the corresponding door card to open the door by swiping the card. With one beep sound door open.

The screenshot shows the 'Door Phone' configuration interface. The left sidebar has a tree view with various settings like Basic, Time&Date, Call Feature, Voice, Ringtones, Dial Plan, Action URL, Multicast, Intercom, Door Lock, Access (which is selected and highlighted with a red box), Alarm, and Camera. The main panel has tabs for 'Open Door By DTMF Code', 'Identify Door Phone', and 'Access Card'. In the 'Access Card' tab, there's a table listing access cards with columns for Index, Room Number, RFID, Type, Door Number, Register Time, and Period. A specific row is selected, and its details are shown in a 'Card Register' section below: Door Number (182), Room Number (1), and RFID (b01b949c). The 'Help' panel on the right provides descriptions for various features and includes a 'Submit Shortcut' button.

### 3.3 Enter the password to open the door

Click “Door Phone- Access”, in the “Access Card” items, select “password”

This screenshot is similar to the previous one but shows a different configuration. In the 'Access Card' table, the 'Card Type' dropdown is set to 'Password' (highlighted with a red box). The table lists one card entry: Index 1, Room Number 1, Password '\*\*\*\*\*', Type normal, Door Number 182, Register Time 2021-06-25 08:27:08, and Period -. The 'Card Register' section at the bottom shows the same data: Door Number 182, Room Number 1, and Password '\*\*\*\*\*'. The 'Help' panel on the right remains the same.

## 3.4 DTMF Open Door

Click “Door Phone- Access”, in “Open Door By DTMF Code”, click “Enabled”to configure DTMF Code to open door  
After setting, click Submit button.

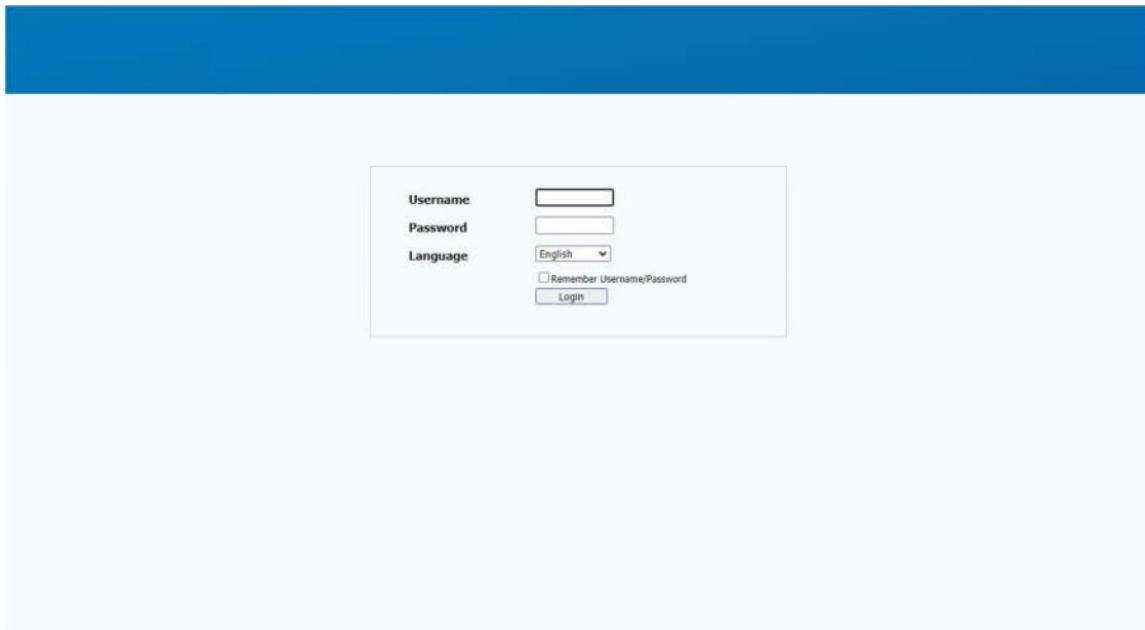

The screenshot shows the 'Door Phone' configuration interface. On the left is a sidebar with various settings: Basic, Time&Date, Call Feature, Voice, Ringtones, Action URL, Multicast, Intercom, Door Lock, Access (selected), Alarm, and Camera. The main area has tabs for Status, Account, Network, Door Phone (selected), PhoneBook, Maintenance, and Security. A timestamp at the top right says 'Default password. 2021/08/02 08:52'. The 'Door Phone' tab is active, showing the 'Open Door By DTMF Code' configuration. It includes dropdown menus for Active (Enabled), Door 1 (1), Door 2 (0), and All Doors (3). Below this is a 'Identify Door Phone' section with an 'Identify' button and a 'Submit' button. Under 'Access Card', there's a 'Card Type' dropdown set to 'RFID', a search bar for 'Search By Room Number', and a table for managing access card records. The table columns are Index, Room Number, RFID, Type, Door Number, Register Time, Period, and a checkbox column. At the bottom are buttons for Back, Forward, Refresh, Delete, and Delete All.

DAP supports 3 types DTMF: Inband、RFC 2833、SIP INFO

## 4 Web configuration

Press DSS1 key continuously for 10 seconds, and the device will broadcast its IP address.

Open the browser on the PC, enter the phone IP address, such as <http://172.31.2.229>, enter the user name and password to log in to the phone web interface, the default user name and password: admin / admin.

## 4.1 Status->Basic

Basically the Status in Web menu showing the Product information, Network information, you can roughly know the product model, network connection & account registration, As shown below,

Product Information	
Model	DP88
MAC Address	60-C7-A3-10-37-31
SN	1021-3344-5566-7788
Firmware Version	2.88.6.0.2
Hardware Version	88.2.0.0.0.6.0
Uptime	0 day 0 h 30 min

Network Information	
LAN Mode (IPv4/IPv6)	IPv4 & IPv6

IPv4	
LAN Port Type	DHCP
LAN IP Address	172.25.1.17
LAN Subnet Mask	255.255.255.0
LAN Gateway	172.25.1.1
LAN DNS1	172.16.0.1
LAN DNS2	114.114.114.114

IPv6	
LAN IPv6 Port Type	DHCP
LAN IPv6 Address	
LAN IPv6 Gateway	
LAN IPv6 DNS1	
LAN IPv6 DNS2	

Other	
LAN Link Status	Connected
Primary NTP	0.pool.ntp.org
Secondary NTP	1.pool.ntp.org
VPN Status	Disabled
NMS Status	Disabled

\*

Product Information	Display the basic information of the settings, such as Model, MAC Address (physical address of the IP device), Firmware Version, and Hardware Version.
Network Information	<ul style="list-style-type: none"> <li>Display the set network status, Ex: LAN Port Type (DHCP/Static)</li> </ul>

	<ul style="list-style-type: none"> <li>• IP/PPPoE）、LAN Link Status、LAN IP Address、LAN Subnet Mask、</li> <li>• LAN Gateway、LAN DNS1、LAN DNS2、Primary NYP and Secondary</li> <li>• NTP（NTP server is used to automatically synchronize the time from the Internet）.</li> </ul>
Account Information	Display device account information and registration status (account user name, registration server address and registration result).

## 4.2 Account

The account in web GUI Include

1. Basic system information;
2. Advanced account display & configure;
3. Audio, video codec display & configure.

### 4.2.1 Account->Basic

The screenshot shows the 'Basic' tab selected under the 'Account' menu. The interface is divided into several sections:

- SIP Account:** Settings include Status (Account1: 7001, Enabled), Active (7001), Display Name (7001), Register Name (7001), Username (7001), and Password (\*\*\*\*\*).
- SIP Server 1:** Settings include Server IP (172.25.23.140) and Port (5060). A note indicates Registration Expires (1800) with a range of (30~65535s).
- SIP Server 2:** Settings include Server IP (empty), Port (5060), and Registration Expires (1800) with a range of (30~65535s).
- Outbound Proxy Server:** Settings include Active (Disabled), Server IP (empty), and Port (5060). There is also a Backup Server IP field with a Port (5060) setting.
- Transport Type:** A dropdown menu set to UDP.

At the top right, there is a timestamp: Default password, 2021/07/01 03:32.

**NAT**

NAT	<input type="button" value="Disabled"/>	
Stun Server Address	<input type="text"/>	Port: 3478

**VPN**

VPN Preferred	<input type="button" value="Enabled"/>	
---------------	--	--

\*

SIP Account	Display and configure basic account information: <b>Status:</b> Display account registration results; <b>Display Label:</b> The label displayed on the screen; <b>Display Name:</b> Send to another caller for display; <b>Register Name:</b> Assigned by SIP server provider; <b>User Name:</b> Deploy SIP account by SIP server; <b>Password:</b> Certification authorization while do the registration & call.
SIP Server 1	Display and configure master server information: <b>Server IP:</b> SIP server address can be a domain name or an IP address; <b>Registration Period:</b> The IP phone will automatically re-register within the registration period;
SIP Server 2	Display and configure secondary server information: <b>If registration secondary SIP server, the IP phone will go to both Primary/secondary SIP server together at the same time.</b> If registration fails on the primary SIP server, the IP phone will go to the secondary SIP server for registration. <b>Notice :</b> The secondary SIP server is used for backup, if the user environment does not have a backup SIP server, it can be left blank;
Outbound Proxy Server	Display and configure proxy server settings. The proxy server is used to receive all activated request messages and route them to the designated SIP server. <b>Notice:</b> If configured, If a proxy server is configured, all SIP request messages from IP phones will be sent to the proxy server forcibly.
Transport Type	Display and configure the transmission type of SIP messages: <b>UDP:</b> UDP is an unreliable but very effective transport layer protocol; <b>TCP:</b> Reliable but less efficient transport layer protocol; <b>TLS:</b> Safe and reliable transport layer protocol; <b>DNS-SRV:</b> Is a type of DNS record used to specify the server address;
NAT	Display and configure NAT (Network Address Translator): <b>STUN:</b> Simple traversal of UDP on NATS is the solution to all NAT problems. <b>Notice:</b> By default, NAT is disabled.
VPN Preferred	Device can send or receive command and media data via VPN port if device enable the VPN. <b>Notice:</b> By default, VPN is enabled.

#### 4.2.2 Account-Advanced

This advanced web GUI can select account and also can do configure operation, such like DTMF, CALL, NAT, KEEP ALIVE, see as below.

The screenshot shows a web-based configuration interface for a device. At the top, there's a navigation bar with links for Status, Account, Network, Door Phone, PhoneBook, Maintenance, Security, and a language selection for English. Below the navigation is a timestamp: 2021/07/01 05:46:37. The main content area is divided into several sections:

- SIP Account:** Shows the account ID as 7001.
- DTMF:** Set Type to RFC2833, Info Type to DTMF-Relay, and Payload to 101 (96~127).
- Call:** Includes fields for Min Local SIP Port (20000), Max Local SIP Port (20299), and various call-related options like Peer to peer call, Auto Answer, Ringtones, etc.
- NAT:** Set UDP Keep Alive Messages to Enabled, UDP Alive Msg Interval to 30 (5~60s), and RPort to Disabled.
- Keep Alive:** A section for UDP keep-alive parameters.

**Help**

**Description:**  
DTMF  
The signal sent from the door phone to the network is generated by pressing the keyboard during a call.

**Call:**  
Call related settings

**NAT:**  
SIP will periodically send UDP KeepAlive packet to the server in case the server may shutdown UDP port.

[You can click here to get more guides.](#)

**Warning:**

**Field Description:**

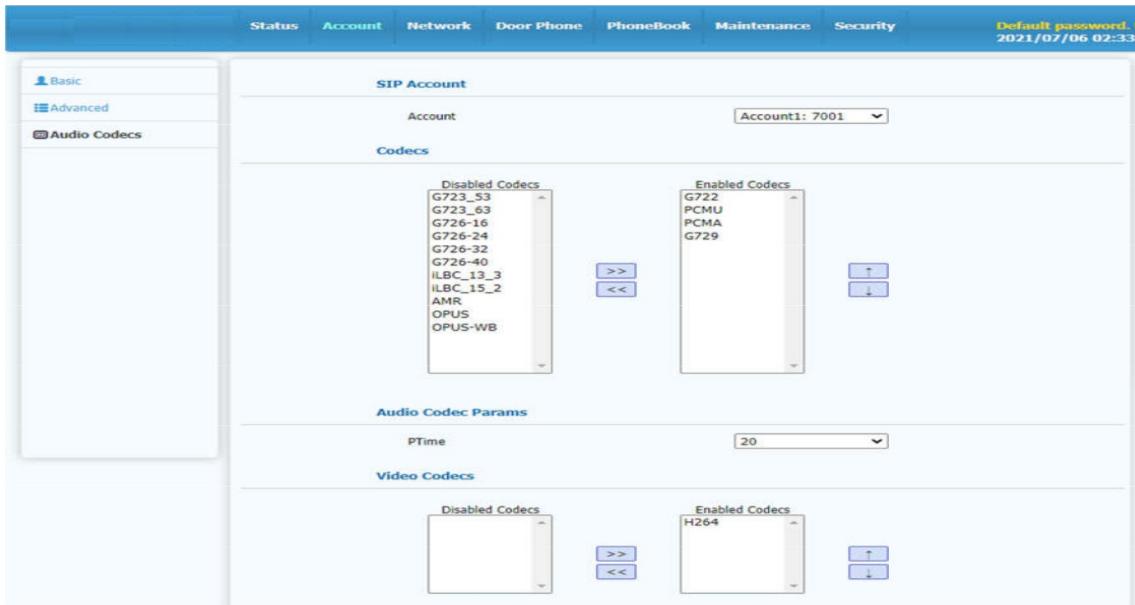

**Submit Shortcut:**

*	
SIP account	Display the current account settings or select the account to display.
DTMF	Display the DTMF type (Inband、RFC 2833、Info)、DTMF info type (DTMF-Relay、DTMF、Telephone-Event)、DTMF payload (96~127)。
Call	<p>Display call configure items, include local SIP port range(It will prompt when set port range occupied, Use New SIP Port When Registration Fail, Peer to peer call, Auto Answer, Ringtones, Invite with user=phone, Send MAC Info, Privacy Number, Trust SIP Server Only, TLS Version)</p> <p><b>Min Local SIP Port:</b> cannot be empty, default 20000, Only integers within (1024~65535) can be filled.</p> <p><b>Max Local SIP Port:</b> cannot be empty, default 20299, Only integers within (1024~65535) can be filled.</p> <p><b>Use New SIP Port When Registration Fail:</b> default enable.</p> <p><b>Peer to peer call:</b> Enable device call from server address without pre-registration.</p> <p><b>Auto Answer:</b> Enable device auto answer when call in, default enable.</p> <p><b>Ringtones:</b> Enable to choose phone ringtone.</p> <p><b>Invite with user=phone:</b> Enable the call msg device send include user=phone.</p> <p><b>Send MAC Info:</b> Enable device bring its MAC address when do the registration.</p> <p><b>Privacy Number:</b> default empty, (empty、ID、PAI) available.</p> <p><b>Trust SIP Server Only:</b> Device only receive SIP command from trust SIP server.</p>

	<b>TLS version:</b> Enable device do the configure for TLS version, default Adaptive (Adaptive、TLS 1.0、TLS 1.1、TLS 1.2)
NAT	<p>IP phones can send valid data packets that keep the communication port open to the NAT server;</p> <p><b>UDP Keep Alive Messages:</b> options, default Enabled, can choose (Enabled and Disabled);</p> <p><b>UDP Alive Msg Interval:</b> When UDP Keep Alive Messages is Enabled, it cannot be empty, the default is 30, [1,63] characters, only integers within [5,60] can be filled; when UDP Keep Alive Messages is Disabled, this item is not available Edit status</p> <p><b>RPort:</b> optiond, default Disabled, can choose (Enabled and Disabled);</p>
Others	<p><b>Sync Time from SIP Server:</b> Enable device sync time via SIP server, default Disabled.</p> <p><b>Use IPv6 Stateless Address:</b> Enable use IPv6 Stateless Address when registration, default Enabled, (Enabled、Disabled)。</p> <p><b>SIP Registration Retry Timer:</b> The interval time when re- registration after configure SIP fail, default is 100 second, (1~1800 second)。 <b>Unregister When Reboot:</b> Enable device logout after device reboot, default Disable, (Enabled、Disabled)。</p>

### 4.2.3 Codecs

Codecs display & configure supported audio codecs, PTime, Codecs Payload, see as below,

\*

Audio Codecs	Display and configure a list of available / unavailable codecs. A codec refers to a codec used to convert analog signals into digital signals or digital signals into analog signals. Familiar codecs are PCMU (G711U), PCMA (G711A), G722 (broadband codec), G729, G723_53, G723_63, G726_16, G726_24, G726_32, G726_40.
Audio Codec Params	PTime : Default 20ms, (Disabled、10、20、30、40、50、60)
Video Codecs	Currently only support H.264.
Video Codec Params	Codecs Payload: Default 96, (96~127)。

## 4.3 Network

Web GUI mainly display & configuration, include devices network IP address get, TR069 Network management, NMS Cloude management service, VLAN & Qos etc.

### 4.3.1 Network Basic

The screenshot shows a network configuration interface with a sidebar containing links like Status, Account, Network, Door Phone, PhoneBook, Maintenance, Security, and a timestamp indicating the default password was set on 2021/07/06 03:04.

**LAN Port Mode**

LAN Mode (IPv4/IPv6) dropdown: IPv4&IPv6

**LAN Port IPv4**

Radio button: DHCP (selected), Static IP

IP Address: 192.168.1.240  
Subnet Mask: 255.255.255.0  
Default Gateway: 192.168.1.1  
Static DNS: 8.8.8.8  
LAN DNS1:   
LAN DNS2:

**LAN Port IPv6**

Radio button: Static IP (selected), DHCP

IP Address: 3123:4563:7654:1234:1245:7890:32:  
Prefix Length: 64  
Default Gateway: 3123:4563:7654:1234:1245::  
Static DNS:   
LAN DNS1:   
LAN DNS2:

**LAN PPPoE**

Radio button: PPPoE (selected)

Username:   
Password:

\*

LAN Port Mode	Configure LAN Port mode, Default is IPv4, (IPv4、IPv6、IPv4&IPv6) .
LAN Port IPv4	Configugre the way LAN Port get IP address with IPv4, default is DHCP,(DHCP、Static IP)
LAN Port IPv6	Configugre the way LAN Port get IP address with IPv6, default is DHCP,(DHCP、Static IP)
LAN Port PPPoE	Configure the PPPoE's verification's password & password via LAN Port.
Speed and Duplex	Configure the LAN Port connection speed, Deaful is

### 4.3.2 TR069

TR069 mainly display & configure TR069 parameters, TR-069 (Technical Report - 069) is a remote control terminal communication protocol based on CWMP(CPE WAN Management Protocol), see as below,

The screenshot shows a network management interface with a top navigation bar containing tabs: Status, Account, Network (which is highlighted with a red box), Door Phone, PhoneBook, Maintenance, and Security. To the right of the tabs, it displays "Default password: 2021/07/06 03:32". On the left, a sidebar lists several configuration sections: Basic, TR069 (highlighted with a red box), SNMP, NMS, VLAN&QoS, 802.1X, VPN, and Diagnosis. The main content area is titled "TR069" and contains two groups of settings: "ACS" and "CPE". The "ACS" group includes Active (Disabled), Version (1.0), URL, Username, and Password. The "CPE" group includes Active (Disabled), Periodic Interval (1800), URL, Username, and Password. At the bottom are "Submit" and "Cancel" buttons.

\*

Active	To enable or disable TR069 feature.
Version	To select supported TR069 version (version 1.0 or 1.1).
ACS URL	ACS: ACS is short for Auto configuration servers as server side.
Username/Password	Configure Username/Password when connect to the ACS server.
Periodic Inform Active	To enable periodically inform.
Periodic Interval	To configure interval for periodic inform, default 1800 seconds,(3~24x3600s)
CPE URL	CPE is short for Customer-premise equipment as client side devices, mainly use for service & client dual-way verification.
CPE Username/Password	Configure Username/Password when server verificate to CPE side.

### 4.3.3 SNMP

SNMP is a simple network management protocol, To display and configure SNMP settings, see as below.

**SNMP**

Active	Disabled
Version	v1/v2c
Trusted IP	

**Submit**    **Cancel**

\*

Active	To enable or disable SNMP feature.
Version	To select supported SNMP version, default is v1/v2 ,(v1/v2、 v3)
Trusted IP	Configure SNMPserver IP address

#### 4.3.4 NMS

NMS is a private cloud network management system based on HTTP protocol, NMS support online setting, remote control, auto deploy & update for the terminal, see as below,

**NMS**

Active	Disabled
Server Address	
Server Port	20006
Interface	Default

**Submit**    **Cancel**

\*

NMS Active	To enable or disable NMS feature.
Server Address	To configure cloud network server address or domain name.
Server Port	To configure cloud network server port.
Interface	To configure terminal & cloud network server port name, (default, PPPoE,tun0, tap0 is optional)

### 4.3.5 VLAN&QoS

VLAN&QoS is to display & configure VLAN parameter on LAN port, and then set SIP command & QoS of Audio, see as below,

\*

VLAN LAN Port	To configure VLAN property of LAN port: <b>Active:</b> To enable or disable VLAN feature. <b>VID:</b> To configure VLAN id for designated port. (1~4093) 。 <b>Priority:</b> To select VLAN priority for designated port.. (0~7) 。
VLAN DHCP Option	To configure the VLAN property when DHCP receive the server address. <b>Active:</b> To Enable or disable the VLAN property when DHCP receive the server address. <b>DHCP option:</b> To configure DHCP receive VLAN setting, (128~254) .
QoS	To display and configure QoS settings. <b>SIP QoS:</b> To configure QoS value for all SIP message. <b>Voice QoS:</b> To configure QoS value for all audio stream(RTP streams).

### 4.3.6 802.1X

802.1X is to display and configure 802.1x settings. 802.1x is a verification framework, support multi-verification protocol, currently mainly protocol like EAP-MD5、EAP-TLS、EAP-TTLS、EAP-PEAP & EAP-FAST etc, see as below,

The screenshot shows a network management interface with a sidebar on the left containing links like Basic, TR069, SNMP, NMS, VLAN&QoS, 802.1X, VPN, and Diagnosis. The main content area has tabs for 802.1X and CA Certificate.

**802.1X**

- 802.1X Mode: Disabled (dropdown menu)
- Provisioning Mode: Unauthenticated Pr (dropdown menu)
- Anonymous ID: (text input field)
- Identity: (text input field)
- Password: (password input field)

**CA Certificate**

Index	Issue To	Issuer	Expire Time
1			
2			
3			
4			
5			

**CA Certificate index Select**  
Index: 1

**CA Certificate Upload**  
Index: Auto  
Browse: not selected

\*

802.1x	<p>To display and configure 802.1x settings.</p> <p><b>802.1x Mode:</b> To enable or disable 802.1x, default is disable. (EAP-MD5、EAP-TLS、EAP-TTLS、EAP-TTLS/EAP-MSCHAPv2、EAP-TTLS/EAP-GTC、EAP-PEAP/MSCHAPv2、EAP-PEAP/GTC、EAP-FAST）.</p> <p><b>Provisioning Mode:</b> When verification protocol is EAP-FAST, can identify whether use identity verification or without identity verification through configure Provisioning.</p> <p><b>Anonymous ID:</b> To configure anonymous ID to replace actual user ID makes user more secure.</p> <p><b>Username/password:</b> insert username/password when configure.</p>
CA Certificate	To provide CA Certificate index display & upload feature.
Device Certificate	To provide Device Certificate index display & upload feature.

### 4.3.7 VPN

To display and configure VPN setting, include enable or disable Open VPN feature, and provide VPN certificate upload, currently support Open VPN features.

Default password.  
2021/07/06 07:34

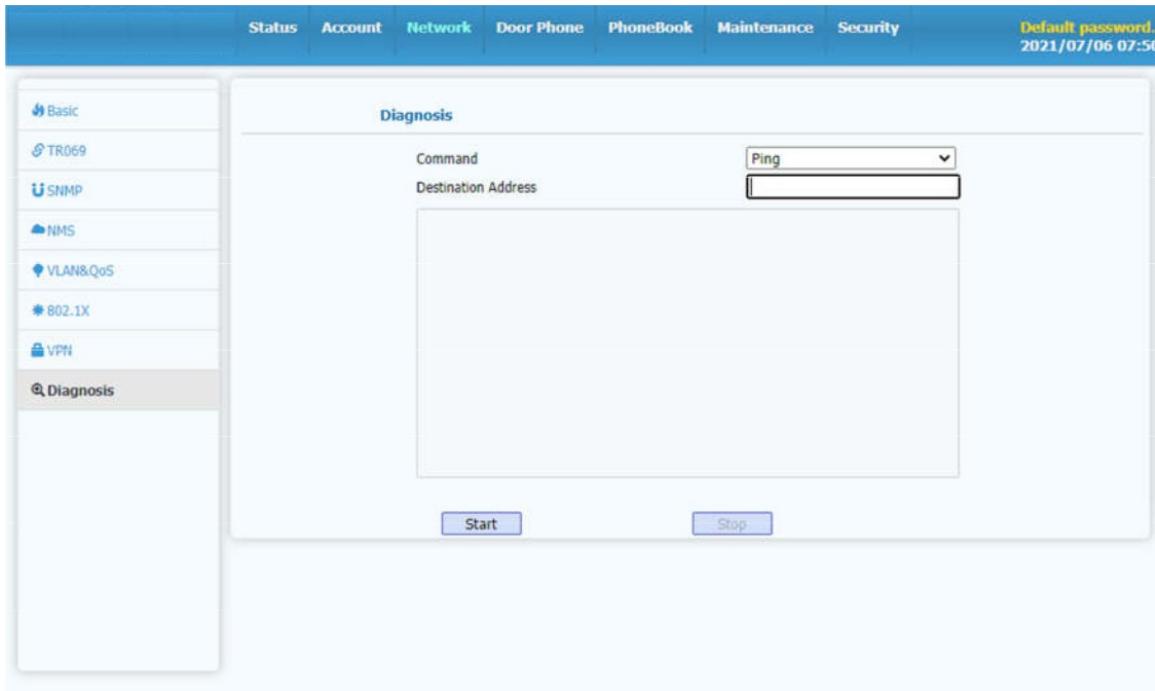

<a href="#">Basic</a> <a href="#">TR069</a> <a href="#">SNMP</a> <a href="#">NMS</a> <a href="#">VLAN&amp;QoS</a> <a href="#">802.1X</a> <b>VPN</b> <a href="#">Diagnosis</a>	<h3 style="margin: 0;">OPEN VPN</h3> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%;">Active</td> <td style="width: 50%; text-align: right;"><input type="button" value="Disabled"/></td> </tr> <tr> <td>Upload(&lt;50K)</td> <td style="text-align: right;"><input type="button" value="Browse"/> not selected</td> </tr> <tr> <td colspan="2" style="text-align: right; padding-top: 10px;"><input type="button" value="Upload"/></td> </tr> <tr> <td style="text-align: center;"><input type="button" value="Submit"/></td> <td style="text-align: center;"><input type="button" value="Cancel"/></td> </tr> </table>	Active	<input type="button" value="Disabled"/>	Upload(<50K)	<input type="button" value="Browse"/> not selected	<input type="button" value="Upload"/>		<input type="button" value="Submit"/>	<input type="button" value="Cancel"/>
Active	<input type="button" value="Disabled"/>								
Upload(<50K)	<input type="button" value="Browse"/> not selected								
<input type="button" value="Upload"/>									
<input type="button" value="Submit"/>	<input type="button" value="Cancel"/>								

\*

Active	Enable or disable Open VPN.
upload	To upload VPN client configuration file which is used to connect to VPN server.

### 4.3.8 Diagnosis

Diagnosis mainly support network diagnosis tools, like ping & trace route feature, currently provide ping feature, will complete other functions in next version, see as below,

## 4.4 Door Phone

Door Phone Items display and configure door phone parameters, include device languages, device switch parameter, RFID parameters, time &date configure, call configure, audio & ringtone configure etc...

### 4.4.1 Basic

Basic item display and configure device language, device access parameters, RFID parameters, see as below.

Status Account Network Door Phone PhoneBook Maintenance Security Default password: 2021/07/06 08:17:22

**Basic**

- Time&Date
- Call Feature
- Voice
- Ringtones
- Dial Plan
- Action URL
- Multicast
- Intercom
- Door Lock
- Access
- Alarm
- Camera

**LCD Language**

Type: English

**Display**

Backlight Level: 4

Backlight Time: 30

**Keypad Light**

Active: Enabled

**Switch**

Switch Mode: Monostable

Switch-On Duration: 2 (1~600s)

Second Switch Mode: Monostable

Second Switch-On Duration: 5 (1~600s)

Second Door Open Method: Asynchronous Delay

Asynchronous Delay Time: 5 (1~60s)

**Card Reader**

Enable Card Reader: Enabled

Work Mode: Normal

Wiegand Data Reverse: Auto

**Doorphone Location**

\*

LCD language	Default is simplified Chinese, (English,traditional Chinese optional )
Display	To configure LCD backlight level and backlight time. <b>Backlight level:</b> (level from 1~5) . <b>Backlight time:</b> default is always on, (Always on, 15, 30, 60, 120, 300, 600, 1800, 3600)
Keypad light	Default is auto, (Auto、Enable、 disable) . when choose auto, it will enable on day, disable on night based on the time setting
Switch	To configure door phone switch and time. <b>Switch Mode:</b> configure switch mode, default Monostable, (Monostable, Bistable). Monostable means door will auto close after several times; Bistable means door will close only after get a close signal(for example swipe to open, and then swipe again to close). <b>Switch-On Duration:</b> default 2s, (1~3600s) . <b>Second Switch Mode:</b> same like first switch operation, default is Monostable, (Monostable, Bistable optional) . <b>Second Switch-On Duration:</b> same like first switch operation, default 2s. (1~3600s) <b>Second Door Open Method:</b> Configure whether 2 <sup>nd</sup> door linkage with 1st door , default is independent, (Independent, Asynchronous relay) <b>Independent means :</b> after 1 <sup>st</sup> door open, 2 <sup>nd</sup> door need operation

	<p>independently to open. For example, swipe to open 1<sup>st</sup> door, and then swipe again to open 2<sup>nd</sup> door.</p> <p>Aynchronous relay means swipe can open both 1<sup>st</sup> door &amp; 2<sup>nd</sup> door, default time is 5s, (1-60s)</p>
Card Reader	<p>To configure RFID parameters</p> <p><b>Enable Card Reader:</b> To Enable and disable Card reader, default is enable,(Enable, Disable).</p> <p><b>Work Mode:</b> To configure card reader Work Mode, default is Normal, (Normal, Card Issuing, Card Revoking) .Normal means daily swipe cardto open door; card issuing means to issue card to new card, door will not open on this mode; Card Issuing means to revoke registered card, door will not open on this mode.</p> <p><b>Wiegand Data Reverse:</b> To enable or disable Wiegand data reverse feature to support external wiegand card reader. default is auto, (Auto, Enable, Disable)</p>
Door Phone Location	To configure Doorphone address, Community Name, Building Number, Door Number

\*

Time&Date	Support Manual setting or NTP(Network Time Source), NTP support Time Zone Setting & Update Interval.
DST	Daily Saving Time

### 4.4.3 Call Feature

The screenshot shows a web-based configuration interface for a door phone system. The top navigation bar includes Status, Account, Network, Door Phone, PhoneBook, Maintenance, Security, and a timestamp indicating the default password was generated on 2021/07/07 03:39.

**Left Sidebar (Call Feature Settings):**

- Basic
- Time&Date
- Call Feature** (selected)
- Voice
- Ringtones
- Dial Plan
- Action URL
- Multicast
- Intercom
- Door Lock
- Access
- Alarm
- Camera

**Main Configuration Area:**

- Timeout For Answer:**
  - Outgoing Call: 60 (30~120s)
  - Incoming Call: 65 (30~120s)
- Hang Up After RTP Time Out:**
  - Time Out: 10 (5~60s)
- Call Button:**
  - Call Button Selection: 1
  - Call Key Light: Enabled
  - Call Button Day 1: (empty)
  - Call Button Day 2: (empty)
  - Call Button Day 3: (empty)
  - Call Button Night: (empty)
  - Round Robin Time Out: 60 (5~60s)
- Day Night Setting:**
  - Day Start: Hour: 9 Min: 0
  - Night Start: Hour: 19 Min: 0
- Security Staff Button:**
  - Number: (empty)
- Max Call Duration:**
  - Max Call Duration: 5 (0~30min)

\*

Timeout For Answer	To configure Outgoing call, Incoming call, default is 60s, (30-120s)
Hang Up After RTP Time Out	To configure RTP Time out interval, Door phone will hang out if not receive command when RTP time out, default is 10s, (5-60s)
Call Button	<p>To configure call button feature.</p> <p><b>Call Button Selection:</b> can choose 2 call button.</p> <p><b>Call Key Night:</b> Enable or Disable night call key.</p> <p><b>Call Button Day1/2/3:</b> replace a phone number you want in Bright Day</p> <p><b>Call Button Night:</b> replace a phone number you want in Dark Day</p> <p><b>Round Robbin Time Out:</b> Hang Out Time Interval, for example, if Call Button Day 1 hang out, it will go to Call Button Day 2, call button day 2 hang out, then go to Call Button Day 3</p>
Day Night Setting	<p>Set the start of day time and night time:</p> <p><b>Day Start:</b> Starting point of daytime;</p> <p><b>Night Start:</b> Starting point of night time.</p> <p>Key Pad Light&amp; Call Button Selection configure are based on this Day Night Setting feature.</p>

Security Staff Button	To configure call phone number to security staff.
Max call Duration	To configure the longest talk time, it will automatically hang up after a limited time (time range is 0~ 30minutes), 0 minutes means no automatic hang up.
Local RTP	To configure Local RTP port range, include min RTP port & max RTP port, (1024- 65535)
Hang Up After Open Door	To configure duration for the hang up after opening the door, default is 15s, (0-15s), 0 means hang up immediately after opening the door.
Web Call	To configure a call from web.

#### 4.4.4 Voice

Version	The doorphone firmware & hardware version.				
Upgrade	Click Browse to select a version file to upgrade from LAN.				

## 4.6.2 Auto Provision

Auto Provision , to use for configuration file upgrade , upgrade mode setting and DHCP setting to receive SIP server address, see as below,

**DP Phone**

Status Account Network Door Phone PhoneBook Maintenance Security Default password. Please change it as soon as possible. 2021/07/08 07:00:49

<ul style="list-style-type: none"> <li><a href="#">① Upgrade</a></li> <li><a href="#">Auto Provision</a></li> <li><a href="#">System log</a></li> <li><a href="#">Network Capture</a></li> <li><a href="#">Configuration</a></li> <li><a href="#">PnP</a></li> <li><a href="#">Call Event</a></li> <li><a href="#">Reboot</a></li> <li><a href="#">Door Log</a></li> </ul>	<p><b>DHCP Option</b></p> <p>Custom Option (DHCP Option 66/43 is Enabled by Default)</p> <p><b>Provisioning Server</b></p> <p>URL Username Password Common AES Key AES Key(MAC)</p> <p><b>Auto Provision</b></p> <p>Mode: Power On Schedule: Sunday, 22:00~23:00 (0~59min)</p> <p>Clear MD5 Export Configuration Template</p> <p><input type="button" value="Submit"/> <input type="button" value="Export"/></p> <p><b>Auto Provision Now</b></p> <p><input type="button" value="Auto Provision Now"/></p> <p><input type="button" value="Submit"/> <input type="button" value="Cancel"/></p>
<p>*</p>	

DHCP Option	To receive server ip address via DHCP custom option.
Provisioning server	To input the server URL address which from the server you want, then fill up the username & password, Common AES Key, MAC-AES key. Then select “Power On” in Auto Provision and click “Auto Provision Now”, door phone will auto grade.
Auto Provision	Auto Provision Mode default is Power On, means doorphone will auto download configuration file followed server URL address. <b>Auto Provision Mode :</b> Disable, Power On, Repeatedly, Power On +Repeatedly, Hourly Repeat, Power On+ Hourly Repeat) <b>Schedule:</b> The interval of Auto Provision Mode <b>Clear MD5:</b> Can upgrade again after Clear MD5 <b>Export AutoP Configuration Template:</b> AutoP Configuration Template can be edit, and then put into server URL address.
Auto Provision Now	N/A

### 4.6.3 System Log

\*

Log Level	Default level is 3, (Level 1-7), higher level, more secure.
Export Log	To troubleshoot after export log.
Remote Syslog	To send the doorphone system log to remote syslog server after select Enable.

### 4.6.4 Network Capture

Network Capture now support 2 interfaces, default is “eth0”,another is “VPN”.

**Door Phone**

Status Account Network Door Phone PhoneBook Maintenance Security Default pass 2021/07/08

**Network Capture**

Interface: eth0 ▾ Start Stop

Mirror

Ethernet Port Mirror: Disabled ▾

Allowed Access IP List	<input type="text" value="172.25.23.139"/>														

\*

Web Password Modify	Support 2 accounts, admin & user
Web Session	To configure interval of Web Session time out, means Web will back to the login page if long times no operation.
SSH	To configure SSH login into the shell web page, default is Enable.
Remote Control Allowed Access IP List	To configure remote control allowed access IP list to the doorphone.

### 4.7.1 Security Advanced

To configure upload the Web Server Certificate & Client Certificate, also check these certificates are valid or not, see as below.

The screenshot shows a web-based configuration interface for a 'Door Phone'. The top navigation bar includes links for Status, Account, Network, Door Phone, PhoneBook, Maintenance, Security, and Default password (set to 2021/07/09 01:5). The main content area has two tabs: 'Basic' (selected) and 'Advanced'. Under 'Basic', there are two sections: 'Web Server Certificate' and 'Client Certificate'.  
**Web Server Certificate:** A table with columns Index, Issue To, Issuer, and Expire Time. One entry is shown: Index 1, Issue To IPhone, Issuer IPhone, Expire Time Sun Oct 9 16:00:00 2034. A 'Delete' button is available.  
**Client Certificate:** A table with columns Index, Issue To, Issuer, and Expire Time. Entries range from 1 to 10. The first entry is thawte Primary Root CA, Issuer Thawte Consulting cc, Expire Time Sun Dec 30 23:59:59 2020. Buttons for 'Delete' and 'Cancel' are at the bottom.

## Appendix 1: Fault Resolution

### Problem 1: Speed dial button light not bright

Check the AC power adapter to make sure it is the original power adapter. Check the power outlet. Make sure that the power supply of the outlet into which you plug the device is working properly. Try to plug another device into the outlet to make sure it can power up normally.

### Problem 2: Can't access the web interface

Check the connection between the PC port of the device and the computer network port to make sure everything is working.

Check if the IP address of the device is correct.

If it is a LAN, make sure that there is no conflict with the IP addresses of other devices on the network.

### Problem 3: Unable to call

Please check the network connection status of the device, if there is any abnormality, please check the network connection;

If the network connection is normal, please check whether the device has been successfully registered;

If the network connection and registration are normal, please confirm whether the dialing rules are correct, or contact the service op.

## Appendix 2: Time Zone

Time Zone	Time Zone Name
-11	Samoa
-10	United States-Hawaii-Aleutian
-10	United States-Alaska-Aleutian
-9	United States-Alaska Time
